

Viktor Krapivenskiy

Curriculum Vitae

ABOUT

Regarded by many as a computer programmer. Interested in techniques of writing clean and maintainable code, software design, compilers, parallel programming, systems programming. Author of a number of side-projects. Participant of Google Summer of Code—2017.

SKILLS

Software design · Algorithms and data structures · C · C++ · POSIX API, Linux API · LLVM · Go · Python · Lua · JavaScript · Crystal · POSIX sh, bash.

EXPERIENCE

2017 · Summer of Code Intern (Google) · Implemented Lua scripting for the strace project (C, Lua).

2018 · Software architect (private company) · Implemented infrastructure, bots and various utilites for analysis of order flow and algorithmic trading on a number of cryptoexchanges (Python, MySQL, Redis); refactored existing code; have developed a web interface for accounting and monitoring the status of trading bots in the real time (Python, Flask, JavaScript); have developed a high-performance log analyzer (C++).

2019 · C++ developer (**Offscale**) · Developed **liboffkv**, a uniform interface for distributed key-value storages, in a team of four; implemented C bindings; made a contribution to **ppconsul**: transactions support (C++).

2019 · Software architect (contract with **Sikoba Research**) · Implemented support for LLVM in the verifiable computation framework **isekai** (Crystal). See the following articles for more information:

- **Isekai LLVM update #1**;
- **Isekai LLVM update #2: conditionals and loops**;
- **Isekai LLVM: final update**.

2019 · Software developer (**Fantom foundation**) · Developed tools for internal use.

2020 · Go developer (**Offscale**) · Developed **goffkv**, a rewrite of **liboffkv** in Go.

AWARDS

- | | |
|------|---|
| 2016 | Prizewinner of the All-Russian Olympiad in Informatics, Finals |
| 2016 | Gold winner of the Individual Olympiad of School Students in Informatics and Programming, Finals |
| 2017 | 4 th place in “LAToken hackathon”: smart contract for tokenization of different kinds of assets |
| 2018 | 1 st place in “Global Changers” hackathon: client support bot system |
| 2018 | 1 st place in “IDACB & CryptoBazar hackathon”: chat based on proxy re-encryption protocol |
| 2018 | 1 st place in “Phystech.Genesis” hackathon: mobile application for traveling |
| 2018 | 3 st place in “CryptoBazar Serial Hacking: October”: PoC software raytracer using Intel SGX |
| 2018 | 1 st place in “CryptoBazar Serial Hacking: November”: LLVM IR interpreter with register-based VM |
| 2018 | Mentorship of two teams at “CryptoBazar Serial Hacking: December” that took 2 nd —3 rd places |
| 2019 | 1 st place in “CryptoBazar Serial Hacking: Grand Finale”: network traffic record/replay tool |
| 2020 | 2 st place in “VirusHack”: automatic detection of deviations in a video stream |

PROJECTS

- | | |
|--------------|---|
| 2016—present | luastatus , a universal status bar content generator |
| 2017 | support for Lua scripting in strace , Google Summer of Code—2017 project |
| 2018 | angou , connectors for a number of cryptoexchanges |
| 2019 | spy-tool , a VK app to search for comments of a specified user |
| 2020 | libdeci , an arbitrary-precision decimal arithmetic library for C |
| 2020—present | calx , a bc-like programming language |
